

From SNNs to Silicon: Compiling FPGA Bitstreams from Spiking Neural Networks

Michail Rontionov^{1†}, Jens E. Pedersen^{2‡}, Charlotte Frenkel³,
Francisco Ayala Le Brun³, Nassim Beladel⁴

Emails: [†] m.rontionov@soton.ac.uk, [‡] jegpe@dtu.dk

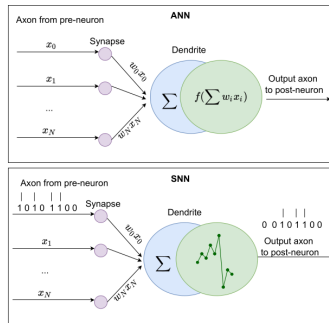

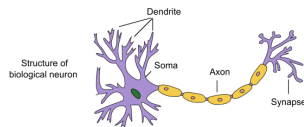

Why this tutorial?

- ▶ Neuromorphic computing addresses

What is Neuromorphic Computing?

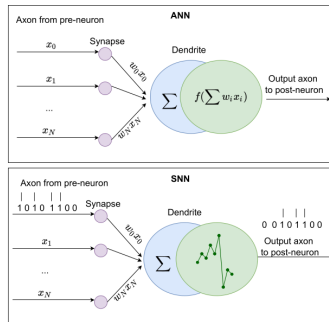

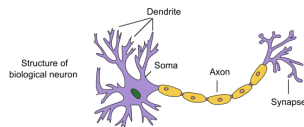

- **Neuromorphic Computing:** Exploring parallels between biological neurons and neural computation.

Biological neuron vs Artificial Neural Network (ANN) vs Spiking Neural Network (SNN) (as in [snn])

What is Neuromorphic Computing?

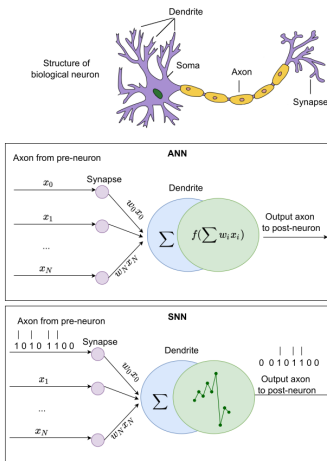

- ▶ **Neuromorphic Computing:** Exploring parallels between biological neurons and neural computation.
- ▶ **Spiking Neural Networks (SNNs):** Neural networks with time domain and more *realistic neuron models*.

Biological neuron vs Artificial Neural Network (ANN) vs Spiking Neural Network (SNN) (as in [snn])

What is Neuromorphic Computing?

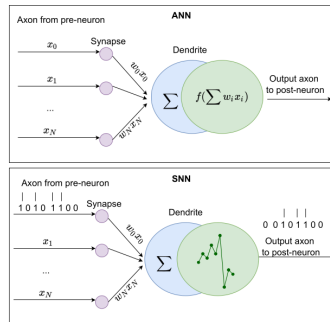

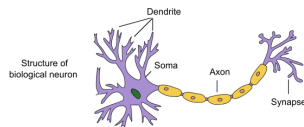

- ▶ **Neuromorphic Computing:** Exploring parallels between biological neurons and neural computation.
- ▶ **Spiking Neural Networks (SNNs):** Neural networks with time domain and more *realistic neuron models*.
- ▶ **Differences** compared to Artificial NNs:

Biological neuron vs Artificial Neural Network (ANN) vs Spiking Neural Network (SNN) (as in [snn])

What is Neuromorphic Computing?

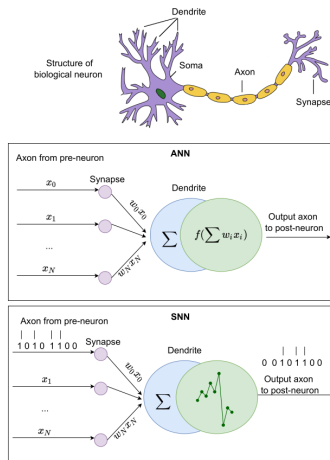

- ▶ **Neuromorphic Computing:** Exploring parallels between biological neurons and neural computation.
- ▶ **Spiking Neural Networks (SNNs):** Neural networks with time domain and more *realistic neuron models*.
- ▶ **Differences** compared to Artificial NNs:
 - ▶ *Sparsity:* Typical ANNs such as AlexNet or VGG models exhibit 60-70% activation sparsity. SNNs can get up to 99%.
